PROFESSIONAL SUMMARY

Backend engineer with production experience building event driven microservices for a multi country business and payments platform serving over 5,000 businesses. Works across Laravel and PHP alongside Node.js and TypeScript, with Kafka based service to service messaging, Redis caching, and MySQL, PostgreSQL and MongoDB. Experience spans agent onboarding and KYC across four African markets, double entry ledger architecture under Nigerian VAT and pension rules, and real time communication systems. Comfortable owning a feature end to end, from specification through code review to release.

EXPERIENCE

Software Engineer

February 2026 to August 2026

Prokip Africa, Lagos, Nigeria

- Sole engineer on the Prokip telesales module, owning it from specification through build and staging release.
- Worked across four services in a distributed architecture covering the main business platform, agent API, finance service and admin, coordinating Kafka event streams, per service JWT authentication and independent databases.
- Built foreign agent onboarding for Ghana, Kenya and Rwanda on a platform supporting over 2,000 agents across four markets, integrating Smile ID for identity verification and KYC compliance across jurisdictions.
- Implemented Redis caching and asynchronous Kafka consumers to decouple high volume workflows from request path latency.
- Delivered a Communication Management module unifying agent and customer messaging, covering real time WebSocket chat, token based customer links requiring no login, automatic email logging, and full interaction history tied to customer and complaint records.
- Built customer feedback capture, CRM data synchronisation across previously duplicated contact sources, and an agent performance reporting suite filterable by agent, date and customer.
- Authored the general ledger architecture blueprint taking the platform toward accounting grade double entry posting, covering Nigerian VAT and pension treatment under IFRS, and structured the delivery roadmap into ten epics across sixteen two week sprints.
- Developed a NestJS and TypeScript finance service exposing internal subscription endpoints for plans and add ons.

Backend Developer, Freelance

January 2024 to January 2026

Remote, Nigeria

- Built full stack web applications with Node.js, Express, MongoDB and React, implementing RESTful APIs, secure authentication and scalable backend architectures.
- Developed responsive frontends in Vue.js, React and Tailwind CSS, integrating dynamic components with backend services.
- Handled deployments and server configuration on Vercel, Render and GoDaddy, tuning performance and production readiness.

Remote

TypeScript, Node.js, Fastify, Express, PostgreSQL, MySQL, RabbitMQ, Mastra

- Progressed through all five stages of a competitive backend engineering programme, shipping a working service against a fixed deadline at each stage.
- Engineered the Template Service within a distributed notification system, covering template versioning, localisation, variable substitution, asynchronous processing over RabbitMQ, idempotency guarantees, health checks and CI/CD contributions.
- Built and deployed an AI agent using Mastra and the A2A workflow protocol, integrated with Telex.im for real time interaction and event handling.
- Delivered REST services integrating third party APIs with refresh only caching, timeout handling and graceful degradation on upstream failure, including derived economic metrics from country and exchange rate data.

PROJECTS

Freelance Marketplace API

2025

Node.js, Express, MongoDB, Passport.js, OAuth, Stripe, Socket.io, Docker, Jest

- Built a full featured REST API covering users, jobs, proposals, contracts, invoices, disputes and reviews.
- Implemented multi strategy authentication with Passport.js, JWT sessions and GitHub and Google OAuth, and integrated Stripe payments with automated invoicing and webhook handling.
- Achieved comprehensive test coverage with Jest and Supertest, and containerised the application with Docker Compose for consistent environments.

Artisan E-commerce Platform with KPI Dashboard

2025

Node.js, React, MongoDB, Recharts, Tailwind CSS

- Built a marketplace connecting artisans, employers and customers with role based access across four user types, secured with JWT and bcrypt.
- Designed an admin analytics dashboard surfacing job success rates, in demand skills and artisan performance metrics.
- Load tested with K6, validating stability at 100 virtual users and 3,000 requests in under 3.3 minutes.

EDUCATION

Babcock University

January 2022 to July 2025

B.Sc. (Hons) Software Engineering, Second Class Upper Division, 4.12 of 5.0

Ilishan-Remo, Ogun State

NYSC: service year concludes October 2026

TECHNICAL SKILLS

Languages: PHP, TypeScript, JavaScript, SQL, HTML and CSS

Frameworks: Laravel, Node.js, NestJS, Express, Fastify, React, Vue.js, Tailwind CSS

Databases: MySQL, PostgreSQL, MongoDB, Redis

Messaging and Async: Kafka, RabbitMQ, BullMQ, WebSockets

Architecture: Microservices, event driven systems, distributed systems, REST APIs

Auth and Security: JWT, OAuth 2.0, Passport.js

DevOps and Tools: Docker, Git, GitHub, CI/CD, Postman, Linux, AWS

Domain: Payments, KYC and identity verification, double entry accounting, CRM
